

# YOUR HEART IS IN THE RIGHT PLACE.

Most of the time I live my life at 72 beats per minute. That wasn't the case the day my heart stopped. Fortunately those around me jumped into action. I arrived at Bronson where a top team of cardiac specialists put my future back into motion. Now I know what it means to be in the care of a Top 100 Heart Hospital. Three days later I was up and about, feeling better than my old self. I can say with certainty my heart was in the right place then as sure as it is today. My son knows that, too. He also knows that ball isn't getting past me. And you know what, neither is the rest of my life.
